

## Vacuum pumps with lubrication G series - 25-35 mc/h

### Characteristics

Gamavuto 25 and 35 m<sup>3</sup>/h lubricated vacuum pumps are characterized by a very simple design, by a strong, compact body and by a simple but efficient air cooling system. In

the "G" series the electric motor is connected to the body of the pump through a flexible connector and this allows the use of different kinds of motors. Equipped with silencers which strongly reduce the noise level, these pumps can be requested also with a single-phase motor. They require only the bare minimum of maintenance since the recycling lubrication allows the oil to be changed or topped up only according to the actual operating times.

### Installation

Connect up the vacuum circuit. Set up the electrical connections to the motor and check that the pump is rotating in the right direction.

**WARNING!** If the electrical motor rotates in the wrong direction, the suction unit could be damaged.
